

REMARKS

Claims 1-23 are pending in this application. Claims 1-3, 5-17 and 19 stand rejected under 35 U.S.C. 102(e) as being anticipated by Battat. Claims 18 and 20-22 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Battat in view of Kelts. Claim 4 stands rejected under 35 U.S.C. 103(a) as being unpatentable over Battat in view of Lai. Claim 23 stands rejected under 35 U.S.C. 103(a) as being unpatentable over Battat in view of Official Notice. These rejections are respectfully traversed.

Battat fails to anticipate claims 1-3, 5-17 and 19 under 35 U.S.C. 102(e), as it fails to disclose each element of the claimed invention. Consider claim 1, which includes “allowing a user to indicate relocation of said graphical object to a location outside of said initial application; and thereafter moving said graphical object to said outside location, preserving state of said graphical object.” Also, consider claim 12, which includes “wherein the logic module is configured to extract a plurality of content elements from at least one data file of a separate application, at least one of the content elements conveying information related to at least one geographical location of the physical world.” The Examiner relies on paragraph [00172] of Battat as disclosing this element, but that paragraph states as follows:

The present invention also visualizes information technology assets from a specific business perspective. The invention enables an isolated view of service levels, problems and administration for specific interests such as order entry and payroll. These business-oriented views of the assets in the network are based in groups. These are arbitrary groupings of things, groupings that make a specific business viewpoint. *The user defines these groupings using simple drag-and-drop operations in the configuration subsystem, using standard GUI technology. The invention further permits the definition of any arbitrary grouping of computers, segments, subnetworks, routers, databases, and applications which may be assigned to a folder.*

(Emphasis added). As such, Battat fails to disclose allowing a user to indicate relocation of said graphical object to *a location outside of said initial application*; and thereafter moving said graphical object to said outside location, preserving state of said graphical object, as to claim 1, or wherein the logic module is configured to extract a plurality of content elements from at least one data file *of a separate application*, at least one of the content elements conveying information related to at least one geographical location of the physical world. The system of Battat operates within a single application, and does not allow a user to relocate a graphical

object outside of that application or to extract a plurality of content elements from at least one data file of a separate application. Claims 2-3, 5-11 depend from claim 1 and claims 13-17 and 19 depend from claim 12, and are allowable at least for the reasons that they depend from an allowable base claim and add additional limitations not found in the prior art. Accordingly, withdrawal of the rejection of claims 1-3, 5-17 and 19 is respectfully requested.

Claims 4, 18 and 20-23 are allowable at least for the reasons that they depend from an allowable base claim and add additional limitations not found in the prior art. Accordingly, withdrawal of the rejection of claims 4, 18 and 20-23 is respectfully requested.

CONCLUSION

A Petition for Revival of an Application for Patent Abandoned Unintentionally Under 37 C.F.R. 1.137 is enclosed with the appropriate fee of \$770.00. A Request for Continued Examination (RCE) is enclosed with the appropriate fee of \$405.00. A check in the amount of \$1,175.00 is enclosed to include the Petition for Revival fee, and the RCE fee. The Commissioner is hereby authorized to charge any fee or credit any refund to the deposit account of Jackson Walker L.L.P., No. 10-0096.

Dated: August 5, 2008

Respectfully submitted,

Jackson Walker L.L.P.
